**EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Authorization for this examiner's amendment was given in a telephone interview with Rhonda Barton on 11/6/2006.

The application has been amended as follows:

From the Abstract, "A suspension stop instrumented under deformation in order to measure forces" has been removed.

From the Abstract, "Figure 1.", has been removed.

At page 1, of the Specification, above all other text, -- TITLE OF THE INVENTION -- has been added.

At page 1, of the Specification, below the preceding text, -- A suspension stop instrumented under deformation in order to measure forces --, has been added.

At page 1, of the Specification, below the preceding text, -- FIELD OF THE INVENTION --, has been added.

At page 1, of the Specification, line 3, -- DESCRIPTION OF RELATED ART --, has been added.

At page 2, of the Specification, line 19, -- BRIEF SUMMARY OF THE INVENTION --, has been added.

At page 3, of the Specification, line 11, -- DETAILED DESCRIPTION OF THE INVENTION --, has been added.

3. The following changes to the drawings have been approved by the examiner and agreed upon by applicant: the cross-hatching will be altered for clarity purposes. In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

Examiner has included a copy of suggested changes to the drawings and requests applicant submit new, formal drawings with careful attention to the proper labeling of the parts, such as the sensors, and the disclosed means of illustrating missing hatching.

4. The following is an examiner's statement of reasons for allowance:

From the original drawings and specification it is apparent the top cup (6) extends circumferentially about the top race (1) and is engaged with the top race; however, due to the method of illustration, the drawings appear to indicate otherwise. Clearly the hatching for the top cup was omitted for illustrative purposes, as the device would not function without the engagement between the top cup and the top race. The device as claimed including the "at least one deformation sensor which is associated with the top race so as to measure the deformations of the top race", defines over the prior art.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

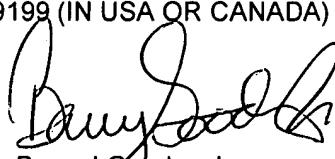

*Conclusion*
